

In the post-epidemic era, how can manufacturing companies use AR smart head mount device to improve efficiency and reduce costs?

The current epidemic prevention situation is repeated, in the production process of the post-epidemic era, enterprises must face the production suspension brought by the sudden outbreak of the epidemic at any time. The real-time support of machinery and equipment makers has become one of the difficulties faced by machine manufacturing companies.

This problem can be solved by using an AR head-mounted device to do a real-time upload of first-view real-time network video and audio for communication. On-site first-line engineers can get seamless support from the expert through the head-mounted device. The on-site engineer shares the first view with the overseas expert personnel and the expert will guide them with instructions and provide necessary instruction for them.

AR head mount device can provide real-time operation tips and step-by-step guidance for front-line workers. Reduce the error rate of manual operation and production managers or technical experts can guide the on-site technician to solve any issue that occurs.

Sysgration HMD-M200 Enterprise Edition

1. Main camera 16-MP
2. Front camera 8-MP
3. Industrial noise cancellation
4. Fingerprint scanning
5. Adjustable boom arm
6. Clip to PPE
