## Universal Panel Computer for Reverse Vending Machine

The increasing amount of waste generated can be solved by recycling, nowadays with the enhancing technologies, a Reverse Vending Machine Concept is one of the important approaches to overcome waste. A general overview of the Universal Panel Computer mounted in the Reverse Vending Machine (RVM) is shown in the picture above. Which contains a 10.1" panel computer with projected capacitive touch and the system was installed into an RVM

**Sysgration's** Universal Panel Computer is one single design to offer the flexibility of installing the unit in Panel Mount for RVM applications. Easy installation and sleek thin bezel with one symmetrical design for both portrait/landscape, fitting a variety of business requirements. Other options include RS232 serial ports allowing users that may need a large number of serial ports to connect to other peripherals.
